Custom Feature on Plusagency CMS

In summary:
I got some custom features built for a Laravel CMS by a dev, but unfortunately now he is unavailable, so I need a new dev to take over, and fix up certain issues/features to the custom features source, and finally update it with the CMS. This task requires a Laravel expert dev and skilled in Laravel/PHP/APIs, or someone who did a similar kind of work before, otherwise it will definitely not work out.

CUSTOM FEATURES	
👇 **PENDING ISSUES** 👇	
Custom Feature Type	**Issues Description**
1. **Custom category "Child Category"** **Location**	• Its a custom extra "child category" created, not a default "plusagency cms" category • Test imported CSV with child categories, but CHILD CATEGORIES not getting picked up • CSV File Child Column • After Import = Blank child category
2. **Custom Importer CSV** **Location**	• Missing product images issue: CSV Importer imports and uploads MAIN PRODUCT IMAGE, but skips to pick up other/slider images from URL inside Sample CSV file, example missing images, at times replicating main product image, while it should come like this. • If possible, selectable product Export of individual/group/category/any type of products, similar to Woocommerce Exporter. Csv Exporter -> https://drive.google.com/file/d/19l_qBbNHe2Yz5d4B2L1IfgYiMdBXzrRP/view

	Csv Import -> https://drive.google.com/file/d/1gsdEFGxNr_htc2kXFjyoNnOjAeCoFwX_/view?usp=sharing
3- New feature "Stock Notifier"	● Product out of stock notifier, example plugin
4- New feature "Multivendor/b2b"	● Require a multivendor functionality on Plusagency CMS, B2B type user accounts with multi currency pricing.
5- Frequent 500 Errors	● At times I face 500 errors, example when attempting backup, results in error. Similarly, I face "500 error" on multiple instances in admin, so need a permanent fix for this. ● Frequent 500 errors faced on certain functionalities, for example, need a permanent fix for 500, or steps which I can follow to self fixing.
6- Questions	● Can we make use of Script 1, Script 2 or Script 3 for any benefit to this project? ● Plugin must **not** conflict with future CMS updates from the author. >Suggested idea: We put the CMS in the Github private repository to maintain the change log, and can restore our updates after the CMS update in future. ● I deputed an HTML template design along with custom plugin, can you work on it to fix certain UI/Design issues?
7- More coming

👇 **ALREADY FIXED ISSUES** 👇	
1. Custom Product Variations screenshot	Add features example variant, compare with variant product: ● Global Variant ● Variant Thumbnails ● Variation Title name, example "COLOUR: AMBER". ● Variant type, list/radio/etc missing, add TYPE options like "product custom fields" ● Overall, product variants must look beautiful in the frontend, or whatever best you can suggest/advise me here. Fixes required for product variation issues, example: ● I deleted 2 variation **test** & **test2**, but both still displaying in live page ● Selecting another variant = Paperback, incorrectly rolls back to first variant "test" ● default product attributes to show if the user deselects a variant, example attributes here See here -> https://drive.google.com/file/d/1-hD6V3FZ8nGpYPA18FITKtpg4-h9vJwS/view
2. Custom Product Attributes screenshot	● Add Default attribute sort order + Add global attributes to product ● Example plugin Shown in above
3. Custom Product Field screenshot	● Add all the regular+PRO features of this plugin, example 1, example 2, example 3. ● Option of Global visibility ● Must be product/category specific

	● Custom Fields doesn't get created [after creating/saving](#), it rolls back to 0 custom fields. ● Match all functionalities 100% See here -> https://drive.google.com/file/d/1TgJPKvPX6rNouEG8Yykg6tubVgyMqP7v/view
4. Additional Product Tabs [screenshot](#)	● [Example plugin](#) = include features in this [screenshot](#), like default tabs, custom unlimited tabs for specific products, per category, etc. See here -> https://drive.google.com/file/d/1CMQS-MuOClczD38oRPISx-vdDiJO--WY/view
5. Require extra feature	● Plusagency CMS has only 1 type of "**MAINCATEGORY**"([example here](#)), but I wish to have add/create "CHILD CATEGORIES". ● Ultimately a sub connected or inherited category from the **main category**, and reflected [here](#). See here -> https://drive.google.com/file/d/1RXtTxJXDG2p8r-upfXgfHr597XLMgiTi/view

HTML TEMPLATE DEPLOYED RELATED TASKS
Requirement	[HTML Template](#) and customized it to integrate with Plusgagency CMS, [example 1](#), [example 2](#). Below are some examples of missing elements and issues, but more can be added to list: ● Search Bar issues [domain](#): Lot of problems and performance issues with search functionality if you notice: -search button only works by clicking 3-5 times + ENTER KEY doesn't work

-only searches actual product name from inventory, entering something else should show error/not found
-entered search word disappears, but results are displayed of actual product inventory.

More:
- Breadcrumbs are missing.
- Header missing contents, screenshot
See here -> https://drive.google.com/file/d/1LIXvsdR5emfEZmtTI2KxqzZz5KtG2OzQ/view?usp=sharing

- Cart sidebar, screenshot
- Login sidebar, screenshot
See here -> https://drive.google.com/file/d/1LIXvsdR5emfEZmtTI2KxqzZz5KtG2OzQ/view?usp=sharing

- Responsive issue, HTML layout should be exactly template.
See here -> https://drive.google.com/file/d/1WDo9X2cG5DFHKOcE2QG5KOyY403Ms7bx/view?usp=sharing

- Footer layouts missing: Some footer layouts are missing, example 1, example 2, example 3, Bookworm 12 homepage layouts have 12 different footers, I want all of them imported.
